

DEFENCE NETTING

AIR & SEA DRONE DEFENCE

STRANDBY NET A/S / HAMPIDJAN GROUP - developer and manufacturer, of specialized net-based solutions for a wide range of challenging needs. Serving customers worldwide.

- ▶ The nets have been tested under realistic operational conditions in a representative environment. They have been developed in collaboration with experienced and highly competent partners, including personnel with military backgrounds and professional drone manufacturers.
- ▶ One particular type of net is virtually invisible in varying environments and is not readily detectable by thermal cameras.
- ▶ The nets can optionally be supplemented with composite poles, for alternative mounting requirements. This primarily refers to vulnerable areas within critical infrastructure, such as power distribution facilities, water supply systems, and other essential infrastructure.
- ▶ The two types used here are PrimaNet HMPE fibers and secondarily, PET Net, Polyethylene Twisted Netting.
- ▶ Both types have been tested with mesh sizes of 50 x 50 mm, and 100 x 100 mm.
- ▶ The production capacity is substantial. We are a part of HAMPIDJAN Group, which is represented worldwide.
- ▶ The product is of Danish/European origin.
- ▶ Strandby Net A/S uses the Danish Technological Institute to test virtually all of the net types it manufactures and supplies.

15"Drone used for test

single personal or group

50 mm 4 x 4 m
Weight: 680g
100 mm 4 x 4 m
Weight: 450g
100 mm Black 4 x 4 m
Weight: 1200g

50 mm 6 x 6 m
Weight: 1500g
100 mm 6 x 6 m
Weight: 1050g
100 mm Black 6 x 6 m
Weight: 2700g

Critical infrastructure
